GooCalSync Version 5 release notes

GooCalSync Version 5 has a new feature to time shift calendar entries synced from Lotus Notes to Google.

This functionality was added to cope with some situations where an issue with daylight saving was incorrectly time shifting calendar entries pushed from Lotus Notes to Google Calendar.

If your Lotus Notes and Google Calendar times are already in Sync select +0 (no time shift).

To use the new feature edit your GooCalSync configuration and select the appropriate number of hours you would like to time shift appointments by, in the example below all calendar entries sent to Google Calendar from Lotus Notes will be time shifted by – 2 hours.
